Perinatal Mood and Behavior Tracking Study
Examining the prevalence of depression during and after pregnancy to evaluate predictors of perinatal depression

Participation in this 22 month study lasts approximately 13 hours:
Participation entails online surveys, research assessments (inclusive of a clinical interview and blood sample collection), and installation of a phone application for continuous behavioral health tracking.

Complete all research study components and:
Earn up to a total of $500. Compensation also includes parking for up to 15 visits at the Westwood OBGYN Clinic ($13 per visit, for a total of $195). Choose to receive parking passes at the time of each visit or have this amount added to your visit compensations.
